Sprint 2 Report (Dates from February 20th to March 24)
YouTube link of Sprint
https://youtu.be/nuFzyt4kLpc

What's New (User Facing)

1. Updated Post UI and Post Editor
2. Liking Posts Feature
3. Commenting Posts Feature
4. Liking Comments Feature
5. Embedded PDF feature (paginated)
6. Paginated Posts feature
7. Saving/Unsaving Posts Feature
8. Creating Folders Feature
9. Report Feature
10. Edit Post & Soft Delete Post feature
11. Searching Post feature
12. Filtering (New, Popular, My Posts) feature

Work Summary (Developer Facing)

This sprint was successful in that we were able to overcome some of the learning curves, developer environment challenges, and other issues that slowed our progress in the previous sprint. From the list of features implemented, you can see that we were busy this sprint, implementing many of the core features of the product, and continuously adapting to changing feedback from the clients.

Our team made a lot of progress in turning the platform from having a basic community structure to a fully interactive system. Instead of just focusing on individual features, we worked step by step to build and integrate everything together, so it flowed well into the whole system. One of our main challanges was adding new features into the pre-existing codebase as we didn't want to break anything and had to understand what was happening in code we didn't write. We ended up handling this by clearly separating the frontend and backend responsibilities and keeping our APIs consistent. We were able to adjust to the new technologies well and have been improving through collaboration and testing.

Completed Issues/User Stories

Traceability Matrix from the start of Sprint 2:

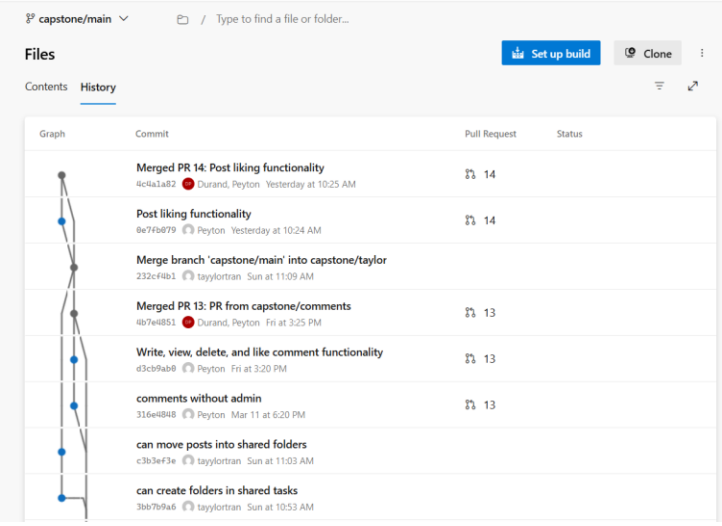
Functional Requirement	**Use Case**	**User Story**	**Priority Level**
[FR-1] Teachers can create/edit/delete posts	[UC-1] - Posting Content	US3: Post Creation: As a teacher, I want to create a post so that I can interact with the community.	0
[FR-2] Teachers can view all posts	[UC-8] - Finding classroom resources	US1: User Login : As a teacher, I want to log in to my account so I can use the service. US2: Viewing Posts: As a teacher, I want to view other teachers' posts.	0
[FR-3] Teachers can upload/download pdfs	[UC-1] - Posting Content [UC-7] - Sharing classroom resources	US3: Post Creation: As a teacher, I want to create a post so that I can interact with the community.	1

	[UC-8] - Finding classroom resources		
[FR-4] Teachers can save and view saved posts	[UC-3] - Saving post	US6: Saving a Post: As a teacher, I want to save on another teacher's post so that i can access the content	0
[FR-5] Teachers can write/view/delete comments	UC-2] - Commenting on a post	US4: Editing a Post: As a teacher, I want to edit one of my previous posts to fix an error in my wording.	0
[FR-6] Teachers can like posts and comments	[UC-5] - Liking posts	US5: Commenting on a Post: As a teacher, I want to comment on another teacher's post to show gratitude or make	1
[FR-7] Teachers can use a prior post as a template for a new one	[UC-1] - Posting Content	US3: Post Creation: As a teacher, I want to create a post so that I can interact with the community.	0
[FR-8] Teachers can report content	[UC-4] - Reporting posts	US7: Report a Post: As a teacher, I want to report posts that are irrelevant, or spread misinformation, or are inappropriate.	1
[FR-9] Teachers can filter and sort posts	[UC-6] - Filtering posts	US8: Search and Filter Posts: As a teacher, I want to filter to posts relevant to me, and be able to search for specific content from other teachers.	1
[FR-10] Teachers can share posts with links	[UC-7] - Sharing classroom resources	US9: Sharing a Post: As a teacher, I want to share a link to another teacher's post so that I can share it with other teachers who need it.	0

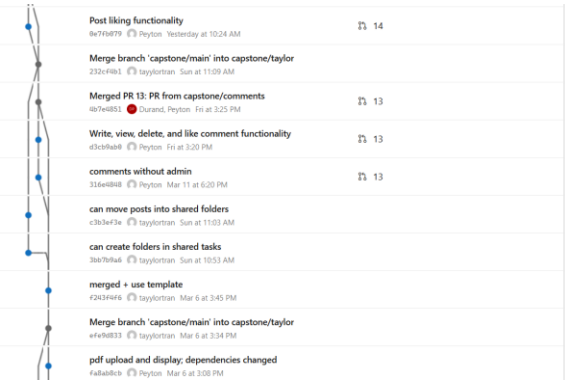
During sprint 2, we implemented all the functional requirements in the table above, except for [FR-10] (share posts with links), because we decided that many of the other features were more valuable to the core product, and ran out of time to implement it.
There is also an initial version of [FR-7] (post template button) that we will continue to iterate in order to match the updated feedback of the client, and the intuitive feel of the application.
The overall UI of the posts, as well as the post editor, is still a work in progress. Though it is much more polished than sprint 1, we need new client feedback on the current design so we can continue to improve it.

While we can't include links to specific code commits in our repository (it is a private Azure devOps repository), here is the commit history that pertains to all of the updated features:

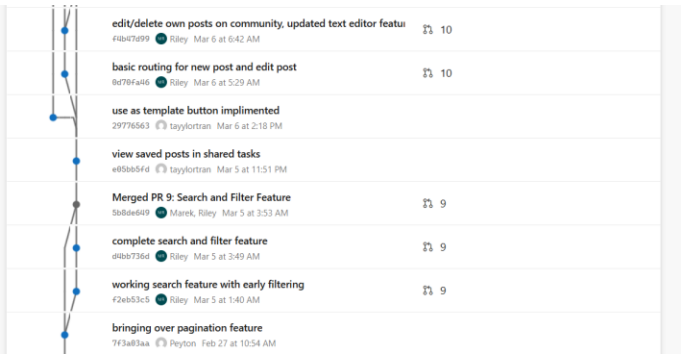
Liking [FR-6], Commenting [FR-5], Shared Folders PR features:



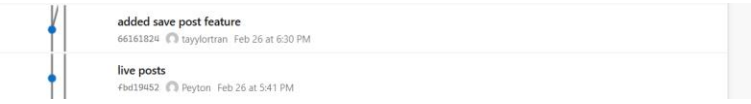
Pdf upload/display [FR-3], Use template features [FR-7]:



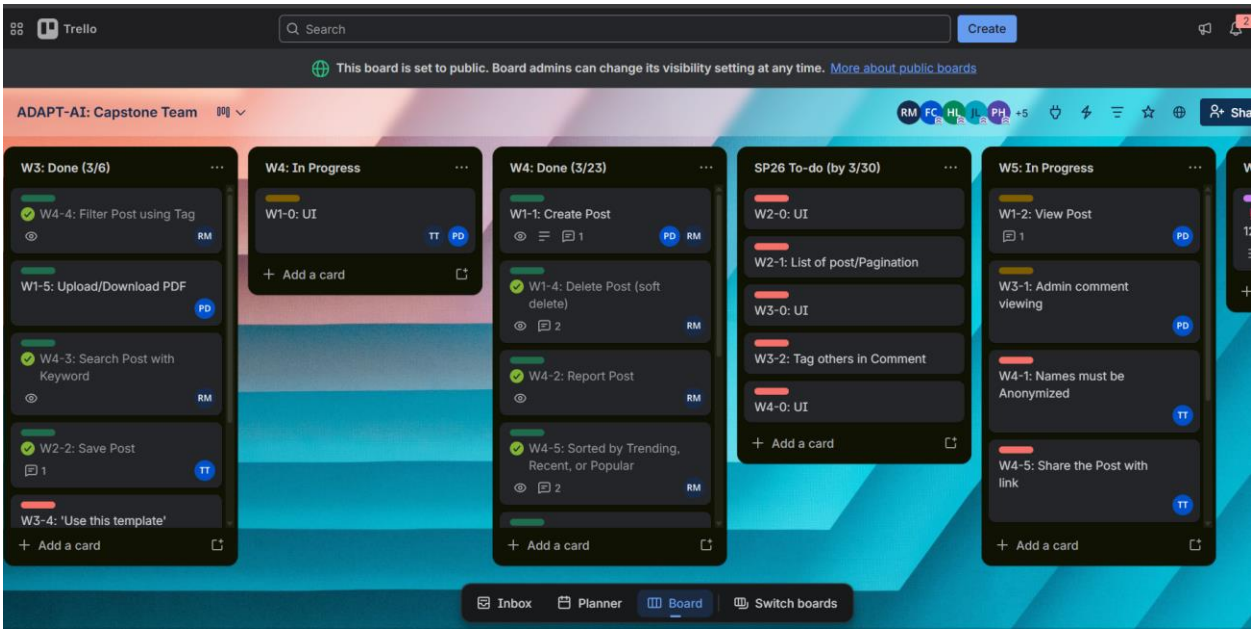
Post routing (full page) editor, edit/delete post [FR-1], search & filter [FR-9], report [FR-8], pagination features:



Save Post [FR-4] and View Posts (Live Posts) [FR-2] feature:



Here is the Trello board used by both our team and the CAIRE/Client team to track progress on each issue/feature. It shows all the issues in the Traceability matrix, which team members worked on them, along with additional client feedback items:



Retrospective Summary

Here's what went well:

* We implemented core features and integrated them into the working system
* Our team collaboration improved since we had to coordinate frontend and backend
* Developing incrementally helped us stay organized, and allowed us to make more progress

Here's what we'd like to improve:

* Earlier testing and integration to catch issues sooner when merging.
* Better time estimation because some features took longer than expected.

Here are changes we plan to implement in the next sprint:
* We could plan out more in advance when sharing a feature with another teammate to ensure that everything can be completed in the time frame.
* Begin integration and testing earlier in the process, merging more frequently with smaller changes.
* Better plan and prioritize tasks to manage time better.
*Asking more questions to the Clients & CAIRE team, so that we have a better understanding of their expectations for certain features
