ADAPT-AI Community

Sprint 5 Report

Peyton Durand · Riley Marek · Taylor Tran

November 10, 2026

01 — OVERVIEW

Introduction

ADAPT-AI is an online community module where K-12 teachers share, discover, and discuss assessments.

TEAM ROLES

Peyton Durand	Backend / UI
Riley Marek	Backend / Deployment
Taylor Tran	UI / UX

CLIENT

WSU CAIRE Team

SPRINT GOALS

- UI changes
- Backend implementation
- Deployment plan

02 — PLAN

Sprint Objectives

01 Redesign community page / editor UI

Give the UI a calm and focused feel while keeping features organized for teachers.

02 Design new community analysis dashboard

Client requested a new analysis dashboard for monitoring community activity.

03 Create testing / deployment plan

Create a simple way for the client to merge our changes over to the production version.

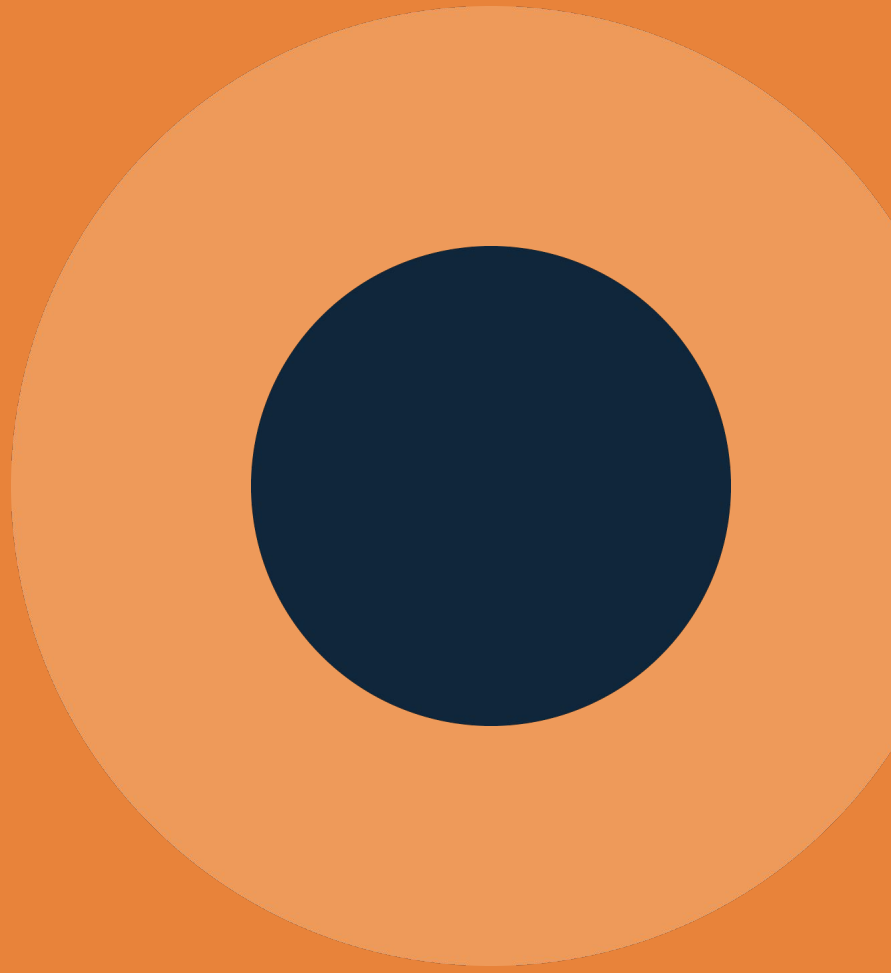

04 Continue backend implementation

Community backend wasn’t brought over from the prior version.

03 — FEATURE IMPLEMENTATION AND DEMONSTRATION

Live Demo

Community page, editor and analysis dashboard

04 — SHIPPING

Deployment

Presented by Riley

STEP 1

Temporary Azure stack

A temporary cloud application stack (db + backend + frontend) spins up on every PR to the main development branch.

STEP 2

Thorough CI/CD testing

Azure CI/CD tests run on the temp stack to reduce system-breaking bugs and make sure database migrations and traffic are handled properly.

STEP 3

Manual verification

CAIRE, professors and the capstone team each check the PR (an automated link to the temp app) before it merges to main and deploys to users.

05 — PEOPLE

Team Contributions

Presented by all

Peyton

Backend / UI

- Designed UI for the new community analysis dashboard
- Implemented backend community page features
- Helped migrate the old database schema to the team's local database

Taylor

UI / UX

- Created multiple UI mockups for the entire community page
- Researched UI design principles and applied feedback
- Added new features to the UI

Riley

Backend / Deployment

- Testing, integration and deployment strategy
- Redesigned the full-page Rich Text Editor for the new UI style
- Researched database migrations and local vs. cloud database integration

Documentation of Report

SECTION	WHAT CHANGED
Introduction	Made the introduction more specific to our work on ADAPT-AI
Architecture Design	Updated to reflect the client's infrastructure changes
User Interface Design	Updated to reflect our team's UI changes
Test Case Specifications	Updated to reflect our testing / deployment plan
Projects and Tools Used	New section
Product Delivery Status	Updated to reflect current status

07 — PRACTICE

Responsible Use of AI

We are fully responsible for our AI output, so we review and adapt it to fit our systems.

01 Assisted with documentation and organizing project information

02 Helped migrate existing backend functionality

03 Generated UI mockups for the community page and admin analytics dashboard

Tools used: ChatGPT and Claude

Sprint Achievements and Challenges

Achievements

- Migrated existing backend functionality
- Created multiple UI mockups
- Continuously refined designs based on feedback

Challenges

- Waiting on access to the development database
- Lengthy approval process

Since last sprint

- Built on previous sprint designs and backend work
- Kept preparing features for integration once access is available

09 — AHEAD

Next Steps and Retrospective

Presented by Riley

01 Multiple calls with **Freeman** (CAIRE tech lead) to implement our thorough testing and deployment strategy

02 Keep iterating on features and user experience with feedback from the professors and CAIRE team in weekly meetings

03 Once the testing pipeline is built, implement the feature and database changes (using our local db environment), then open a final deployment-ready PR for all teams to review

10 — CONCLUSION

Overall, significant progress with the UI

UP NEXT

- Finalize frontend designs and implement
- Migrate all backend functionality from the old codebase
- Testing and deployment

Thank you to the CAIRE team and Professor Parteek Kumar
