# Sprint 4

Peyton Durand, Taylor Tran, Riley Marek

# Introduction

- Adapt-AI Online Community and Professional Learning
  - WSU CAIRE team, Professors He and Li, Professor Kumar

# Sprint Objectives

Sprint 4 Goals:

- Complete remaining community functions.
- Test and review community functions.
- Research and implement a new UI.
- Begin working on database optimization.

# Demo and Research

| Demo | Research |
| --- | --- |
| • Changes to tasks, questions, saved tasks, and filtering UI (see research)<br>• Improved rich text editor, content editing, and template selection<br>• Improved admin dashboard for visual metric analysis<br>• Added announcements page | • Database optimization Research<br>• Testing & Integration Research:<br>Azure DevOps Test Suite, Test Containers (mock traffic), Database migration scripts, squash merge (easy rollback), and gradual release to users<br>• UI Research:<br>Elegant page & filter redesign, optimal color schemes (suggested color redesign), visual data representations |

# Responsible use of AI

- Used codex to find bugs in the frontend code and inconsistencies
- Claude Opus was used to scrape the code files looking for possible database slow-downs.
- Claude Opus to review code & debug

# Sprint Achievements & Challenges

Achievements

- Front end changes/fixes
- Database research
- UI/UX/Usability Research
- Testing & Deployment research

Challenges

- No access to the new codebase & database

# Next Steps, Sprint Retrospective

- Continue to actively seek repository access & current production setup from CAIRE Team
- Continued iteration and improvement on UI, additional requested features, load time optimization, etc.
- Thorough testing of our features, and all our changes to the database (as outlined in Testing and Integration research)
- Integration into the production environment, gradual feature rollout for current users

# Conclusion

- Thank you to the CAIRE team and Professor Parteek Kumar.
